B - GRADE

Report of an Event on “Java Programming”

From 20th September, 2017 to 22nd September, 2017 all the 4th -B.Tech(EEE,ECE & CSE)

Students are participated in Java-Programming conducted by CSE Department and organized by Training and Placement Cell in presence of Mr A Satish

One of the most significant advantages of Java is its ability to move easily from one computer system to another. The ability to run the same program on many different systems is crucial to World Wide Web software, and Java succeeds at this by being platform-independent at both the source and binary levels. Based on a C and C++-based syntax, Java is object-oriented and class-based. Developers adopt and use Java because code can be run securely on nearly any other platform, regardless of the operating system or architecture of the device, as long as the device has a Java Runtime Environment (JRE) installed. The JRE varies depending on the specific type of device, but essentially it runs a “virtual” machine, or environment, that translates the code into an application or program. Although their names are quite similar and they are both used to create dynamic tools and games on a Web page, Java and JavaScript are different languages. Java is more robust and can be used as the sole programming language for an application, while JavaScript is a lightweight scripting language that adds functionality -- like a Java applet -- onto a Web page.
